Printing & Usage Overview

You just pasted a big list into Excel and now half the rows are empty, so you need to excel remove blank rows quickly. You can start by using Excel's filter to hide blank rows, which is the first step in excel remove blank rows. First, select your data range and turn on the filter from the Data tab; then click the drop down arrow on any column header and uncheck the blank option to hide them. After you filter, you can delete the hidden rows, or copy the visible rows to a new sheet to finish the delete empty rows excel cleanup. How to excel remove blank rows and keep data tidy When you paste a large list into Excel, many rows can appear empty because of trailing spaces or hidden cells. Turning on the filter lets you hide those rows instantly. Using filter blank rows gives a quick visual check of which rows are truly blank. After filtering, you have two options: delete the hidden rows or copy the visible rows to a
